

# Virtual Guard Services:

## High-Quality Security Made Affordable

**Virtual Guard services** integrate our traditional video surveillance with two-way audio and rigorous guard protocol to create a hyper-efficient virtual security officer system.

One of the latest innovations in the industry, our virtual security services offer all the benefits of an on-premises security team for less than the cost of hiring a single officer.

## Why choose Virtual Guard services?

Our Virtual Guard service is a cost-effective alternative to full-time security staffing. It combines the benefits of CCTV monitoring and physical security guard presence in one solution.

### Total coverage

We can monitor several areas simultaneously to provide you with comprehensive, 24/7 coverage.

### Highly trained personnel

All Virtual Guard activities are handled by our licensed video monitoring personnel, and housed within our U.S.-based, UL-listed, CSAA Five Diamond Certified Command Center.

### Instant response

If something does go wrong, we have the ability to provide instantaneous video verification to law enforcement and clients, limiting false alarms and reducing response times.

### Reduced cost

The average cost for an on-site security guard can range from \$15 to \$50 per hour per guard — plus benefits, overtime, and other potential costs.

### Custom plans

Our team will work with you to develop a custom security plan that meets your unique needs.

If you're looking into growing your security staff (or hiring a physical guard for the first time), Virtual Guard is a cost-efficient alternative.

# Protect People and Property with Virtual Guard Services

## What Can Virtual Guards Do?

### Virtual patrol

Virtual patrol site tours protect your high dollar assets and high traffic areas any time of the day or night and on your preferred schedule.

### Lone worker/panic response

Our Virtual Guard officers can check-in at predetermined times and be made available at the press of a panic button. If a worker needs assistance, the officer can respond via cameras and two-way audio to communicate that the appropriate help is dispatched.

### Virtual officer escort

Popular for use in parking structures, virtual escorts act as a second set of eyes and ears for employees moving from one vulnerable location to another.

### Virtual doorman

A virtual doorman can check, validate, and record visitor information using audio and video. When someone meets predetermined requirements, the gate or door is remotely opened to allow them access.

### Virtual Opening/Closing

Virtual Guard officers can remotely assist with opening and closing by acting as a second person for safety, support, and compliance.
